Each CDS has been cloned without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the pDNR-Dual vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain
                                                                                                                                                                                                                                                                                                                                                                                                                                 / db xref="01.33304091"

Drotein kinase clk3 (EC 2.7.1.-), testis-specific - rat
NyAlternate names: LAWMER kinase
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Date: 21-Apr-1997 #sequence_revision 09-May-1997 #text_change 09-Jul-2004
C;Accession: S70352
B;Becker, W.; Kentrup, H.; Heukelbach, J.; Joost, H.G.
Biochim. Biophys. Acta 1312, 63-67, 1996
A;Title: cDNA cloning and characterization of rat Clk3, a LAWMER kinase predominately expandately expectation: S70352
A;Accession: S70352
A;Molecule type: mRNA
A;Accession: S70352
A;Molecule type: mRNA
A;Accession: S70352
A;Accession: S70352
A;Molecule type: mRNA
A;Accession: S70352
A;Accession: S703
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              166 RSEIQVLEHLNSTDPNSVFRCVQMLEWFDHHGHVCIVFELLGLSTYDFIKENSFLPFQID 225

N;Alternate names: protein F4Pl2.270
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 19-Mar.1997 #sequence_revision 25-Apr-1997 #text_change 09-Jul-2004
C;Accession: S71169; T45897
R;Kuromori, T.; Yamanoto, M.
submitted to the EMBL Data Library, January 1995
A;Description: A.thaliana genes encoding protein kinases of a new family.
A;Reference number: S71169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | :|:: |:: |::|::| | ||||||||||| ||:|:

June Kinase homolog protein 1, Lkhl protein - fission yeast (Schizosaccharomyces pombe) C; Species: Schizosaccharomyces pombe C; Species: Schizosaccharomyces pombe C; Species: Schizosaccharomyces pombe C; Species: O2-Apr-2002 #sequence_revision 02-Apr-2002 #text_change 09-Jul-2004 R; Kim, K.H.; Cho, Y.M.; Kang, W.H.; Kim, J.H.; Byun, K.H.; Park, Y.D.; Bae, K.S.; Park, F Biochem. Biophys. Res. Commun. 289, 1237-1242, 2001 A; Title: Negative regulation of filamentous growth and flocculation by Lkhl, a fission yet, A; Accession: JC7794 A; Accession: JC7794 A; Accession: JC7794 A; Accession of filamentous growth and flocculation by Lkhl, a fission yet, A; Accession: JC7794 A; Accession of the dual-specificity protein kinase of the LAWMER if acc. by repressing expression of cell surface proteins for flocculation and morphogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     164

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 2, Application US/10878630A
GENERAL INFORMATION:
APPLICANT: Wisotzkey, Robert G.
TITLE OF INVENTION: CDC29-Like protein kinase CLK3 disruptions, compositions and TITLE OF INVENTION: CDC29-Like protein kinase CLK3 disruptions, compositions and TITLE OF INVENTION: CDC39-Like protein thereto
TITLE OF INVENTION: MADRER: US/10/878,630A
CURRENT FILING DATE: 2004-66-28
PRIOR FILING DATE: 2003-66-26
NUMBER OF SEQ ID NOS: 4
SOFTWARE: Patentin version 3.3
SEQ ID NO 2.2

Sequence 8, Application PC/TUSO503526
Sequence 8 Application PC/TUSO503526
GENERAL INFORMATION:
APPLICANT: EXELIXIS. INC.
TITLE OF INVENTION: MBMS AS MODIFIERS OF BRANCHING MORPHOGENESIS AND METHODS OF USE
FILE REFERENCE: EXO5-003C-PC
CURRENT APPLICATION NUMBER: PCT/USO5/03526
CURRENT FILING DATE: 2005-01-27
PRIOR FILING DATE: 2004-01-28
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PATENTIN VETSION 3.2
SEQ ID NO 8
LOCATION: (622)..(653)

OTHER INFORMATION: Protein kinases ATP-binding region proteins domain identified OTHER INFORMATION: Protein kinases ATP-binding region proteins domain identified OTHER INFORMATION: Score of 18.39

FEATURE:
NAME/KEY: DOMAIN
LOCATION: (507)..(674)

OTHER INFORMATION: Extravotic protein kinase domain identified by FFam,
OTHER INFORMATION: accession name pkinase, B-value=3.5e-27, PFam score of 101.9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ģ
                                                                                                                                                                                                                                                                                                                                                                                                                                                               539
